### Service Highlights: Revolutionize Customs

**Documentation:** Managing invoice documentation in the logistics business is complex and time-consuming. This is especially true when preparing data for submission to Customs systems, whether it's for Import Declarations (กศน. 99/1) or Export Declarations (กศน. 101/1). Manual processes carry a high risk of errors, leading to delays, additional costs, and compliance issues. Manually searching for and verifying information such as import/export permit numbers is also a repetitive and burdensome task.

**This service** is ideal for large shipping companies with high document volumes and ERP service providers looking to enhance their solutions with advanced Invoice Automation and Compliance capabilities. With TAILANTIR, operators can ensure that their import and export documents are accurate, precise, and compliant with Thai government regulations.

We offer an OCR service for Invoice PDFs powered by advanced Artificial Intelligence (AI) technology, specifically designed to solve these challenges:

- **Reading Diverse and Complex Invoices:** Using Generative AI/LLM technology, our system can read and understand the structure of various invoice formats, eliminating the need for rigid templates for every supplier or invoice layout.

- **Transform Data to Customs Excel Template:** Our service delivers results in an Excel file formatted according to the specified template, ready for data import into the Thai Customs system (supporting data preparation for กศน. 99/1 and กศน. 101/1). We help you significantly reduce manual data entry steps.

- **Accurate Extraction of Key Information:** The system can accurately read and extract critical information required for Customs declaration, such as buyer/seller names, invoice numbers, dates, product details, total values, currencies, and other relevant data.

- **Ready for Data Lookup:** The system can assist in populating Thai product names by pulling data from your customer's Excel database and flagging items without a Product Number in the database. It can also use data like TARIFF to determine values for other columns.

- **Automated Permit Data Lookup (Optional):** We offer an optional feature to automatically search for and retrieve necessary permit information from relevant government agencies, e

### Service Highlights: Permit Number Search Service:

- **Automated Search:** The TAILANTIR system can automatically retrieve necessary permit numbers from relevant government agencies, such as FDA (อย.) registration numbers or certificates from the Royal Forest Department.

- **Intelligent OCR Integration:** The solution utilizes Generative AI / LLM technology for OCR to accurately read and extract data from various invoice formats, even complex ones, without the need to create a specific template for every format.

- **Data Preparation for Customs Documents:** Processes the extracted data for use in preparing accurate and rapid import (กศน. 99/1) and export (กศน. 101/1) customs declarations.

- **SaaS on Cloud Model:** Delivered as a Software-as-a-Service (SaaS) on the cloud, providing convenient access, flexibility, and scalability according to your needs.

- **Increase Efficiency and Reduce Errors:** Helps reduce manual workload, minimizes the risk of data entry errors, and accelerates the customs documentation process.

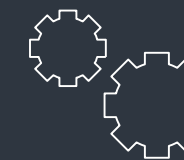

### Benefits You Will Gain: Reduce Costs and Increase Efficiency:

Lower the workload and expenses associated with manual data entry, including the cost of error correction. Faster processing leads to reduced hidden costs throughout the supply chain.

- **Enhance Accuracy:** Minimize the risk of data entry errors, which can lead to issues at Customs and potential fines.

- **Accelerate Customs Clearance:** Ready documents and accurate data facilitate quicker data submission to the e-Customs system, reducing potential delays.

**TAILANTIR for you** is considered a very good option for businesses looking to automate document-based workflows and capture data through electronic forms, particularly when needing robust features for complex processes, data validation, and seamless integration with existing document management capabilities; it allows for efficient data collection, routing, and approval processes with a user-friendly design interface, making it suitable for a wide range of applications across different departments within an organization.

**TAILANTIR** is considered very good for business workflow automation, offering a robust platform with a user-friendly interface that allows for creating complex workflows with minimal coding, making it suitable for a wide range of business needs, from simple document approvals to intricate multi-step processes across different departments; its strengths include flexibility, scalability, and the ability to integrate with other systems.
